

Palmer Square Ultra-Short Duration Investment Grade Fund (PSDSX)

April 2022

As a refresher, the investment objective of the Palmer Square Ultra-Short Duration Investment Grade Fund (the “Fund”) is to seek income. A secondary objective of the Fund is to seek capital appreciation. The Fund is invested primarily in a broad universe of credit such as fixed and floating rate investment grade corporate bond and notes, collateralized loan obligation (“CLOs”) debt, traditional asset-backed securities (“ABS”) debt, and commercial paper. We believe our portfolio presents an ultra-short duration income alternative for investors targeting potential yield, capital preservation, and low volatility.

Since inception (10/7/2016), the Fund has had a flat or positive daily performance 95.5% of the time.

Performance Overview

The Fund returned -0.46% (net of fees) for the first quarter of 2022. The Fund’s current yield is 1.51% and yield to expected call* is 2.51%. Interest rate duration* is 0.41 years and spread duration* is 1.28 years.

The performance data quoted represents past performance and that past performance does not guarantee future results. Investment return and principal value will fluctuate, so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance information quoted. To obtain performance information current to the most recent month-end please call 866-933-9033.

	Allocation	3/31/2022 Price	Yield to Expected Call*

2022 Fund Outlook:

- Solid Diversification - We believe we have solid diversification across both corporate and structured credit. The four main tools we have utilized to do this include investment grade corporate bonds, commercial paper, traditional asset-backed securities, and CLO debt.
- Lower Spread Duration Yet Solid Yield -
 - » Shorter maturity debt/low spread duration (the percentage price change of a bond's price given a 1% change in the yield spread) of 1.28 years should keep susceptibility to spread widening risk and volatility low (note: we already had low interest rate duration (the percentage price change of a bond's price given a 1% change in interest rates)).
 - » Approximately 42% of the portfolio is typically self-liquidating within one year.
 - » Focus on the top end of the credit quality spectrum.
 - » Maintained a strong current yield of 1.51%.
- Investment Grade ("IG") Corporate Bond Allocation - The IG corporate bond exposure was reduced early in the quarter (from 32% to 26%), ahead of the January Consumer Price Index* ("CPI") print which showed the highest y/y inflation numbers since 1980. Rates moved significantly higher from that point forward with the 2Y Treasury yield increasing a further 148bps* finishing the quarter at 2.45%. Short-dated corporate spreads remained stable despite the rate move until the war in Ukraine broke out which pushed spreads 40bps wider by mid-March, only to retrace around 30bps in the final weeks of the quarter. Of the 26% allocation to IG corporate bonds, 5% is in floating rate notes (FRNs) and the remaining 21% is in fixed-rate bonds has an average rate duration of 0.61 years.
- CLO Allocation/Opportunity to Capture Yield and Total Return - We believe the Fund's CLO allocation continues to be well-positioned to offer significant yield (especially on a risk adjusted basis).

*Please see Notes and Disclosure for definitions.

- » AAA-rated debt has been offering approximately 3.5% to 4.0% in current yield. In addition, CLO debt may also benefit should rates rise incrementally from here.
- Traditional Asset-Backed Securities (ABS)/Mortgage-Backed Securities (MBS) Allocation
-As of quarter-end, 25% of the portfolio was allocated to ABS/MBS positions. We believe our primary focus on ABS/MBS securities with low spread durations and floating rate coupons should continue to generate positive performance from this portion of the portfolio. Demand remained strong in the 1st quarter for short duration securities (<2yr WAL) as interest rates increased noticeably. In residential mortgage-backed securities (RMBS), the impact was felt from a duration perspective as extension risk came into play thus causing some spread widening. The move in rates created “all in yield” for ABS to become more attractive thus we increased exposure through both primary and secondary markets. We also added 1% in RMBS exposure given the attractive spread entry point.

ABS/MBS Positions	3/31/2022
Prime Autos	16.9%
Equipment	1.4%
ABS (100% AAA)	18.3%
Agency	0.1%
Single Asset/Single Borrower	2.1%
CMBS (100% AAA)	2.2%
Agency	0.0%
Non-Agency	4.4%
RMBS (100% AAA)	4.4%

Asset-backed Securities (ABS), Mortgage-backed Securities (MBS), Commercial mortgage-backed securities (CMBS), Residential mortgage-backed securities (RMBS)

In summary, we believe the Fund is well-positioned and has potential to not only generate yield, but also provide investors with a low volatility alternative, which can help diversify a fixed income allocation. We believe we are always opportune in our approach to relative value and could not be more excited about how this portfolio is positioned and its outlook.

Performance Summary

Fund Performance Net of Fees as of 3/31/2022 (inception 10/7/2016)

	Q1 2022	2021	2020	2019	2018	2017	YTD 2016
PSDSX	-0.46%	0.05%	1.59%	3.00%	1.84%	1.50%	0.26%
ICE BofA ML U.S. Treasury Bill Index	0.04%	0.05%	0.67%	2.28%	1.88%	0.85%	0.09%

Fund Performance Net of Fees as of 3/31/2022 (inception 10/7/2016)

	1 Year	3 Years	5 Years	Since Inception Annualized
PSDSX	-0.44%	1.03%	1.43%	1.41%
ICE BofA ML U.S. Treasury Bill Index	0.06%	0.81%	1.13%	1.06%

Annual Expense Ratio: Gross 0.68%/Net 0.52%. Palmer Square has contractually agreed to waive its fees and/or pay for operating expenses of the Fund to ensure that total annual fund operating expenses (excluding acquired fund fees and expenses, interest, taxes, dividends and interest expenses on short positions, brokerage commissions and extraordinary expenses such as litigation expenses) do not exceed 0.50% of the average daily net assets of the Fund. This agreement is effective until October 31, 2022, and it may be terminated before that date only by Trust's Board of Trustees. The Fund's advisor is permitted to seek reimbursement from the Fund, subject to certain limitations, of fees waived or payments made to the Fund for a period ending three full fiscal years after the date of the waiver or payment. **The performance data quoted represents past performance and that past performance does not guarantee future results. Investment return and principal value will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance information quoted. A portion of the fees charged is waived. Performance prior to waiving fees was lower than the actual returns. To obtain performance information current to the most recent month-end please call 866-933-9033.**

Summary

The Fund's diverse portfolio across corporate and structured credit has low spread duration, which may lessen the Fund's susceptibility to spread widening risk, (we already had low interest rate duration (the percentage price change of a bond's price given a 1% change in interest rates)), is positioned almost entirely in investment grade securities, yet has offered a strong current yield and potential opportunity for capital appreciation. In essence, we believe the Fund is well-positioned and has potential to not only generate yield and some total return, but also exhibit lower price volatility should another dislocation hit the market. Please do not hesitate to contact us at investorrelations@palmersquarecap.com or 816-994-3200 should you desire more information. We would also be happy to set up a call and/or meeting at your convenience.

The BofA ML US Treasury Bill Index is an unmanaged market index of U.S. Treasury securities maturing in 90 days that assumes reinvestment of all income. Unlike mutual funds, indices are not managed and do not incur fees or expenses. It is not possible to invest directly in an index.

Interest Rate Duration measures a portfolio's sensitivity to changes in interest rates. **Spread Duration** measures the sensitivity of a bond price based on basis point changes of more than 100. **Yield To Call** is the yield of a bond or note if you were to buy and hold the security until the call date. **Yield To Maturity** is the rate of return anticipated on a bond if held until the end of its lifetime. **Current Yield** is annual income divided by price paid. Yield to Expected Call is a Yield to Call metric that assumes callable bonds are not called on their call date, but at some later date prior to maturity. **Yield to Expected Call** is a Yield to Call metric that assumes callable bonds are not called on their call date, but at some later date prior to maturity. Yield to Expected Call considers contractual terms in a bond's indenture or other similar governing document. A bond may be called before or after this date, which has the potential to increase or decrease the Yield to Expected Call calculation. All else equal, when a bond's price is below par, Yield to Expected Call is a more conservative yield metric than Yield to Call. If a bond is not callable, Yield to Expected Call calculates the bond's Yield to Maturity. The **Consumer Price Index (CPI)** is a measure that examines the weighted average of prices of a basket of consumer goods and services, such as transportation, food, and medical care. It is calculated by taking price changes for each item in the predetermined basket of goods and averaging them. **Basis points (BPS)** refers to a common unit of measure for interest rates and other percentages in finance. The relationship between percentage changes and basis points can be summarized as follows: 1% change = 100 basis points and 0.01% = 1 basis point.

Past performance is not indicative of future results. Different types of investments involve varying degrees of risk and there can be no assurance that any specific investment will be profitable. Please note that the performance of the funds may not be comparable to the performance of any index shown. Palmer Square has not verified, and is under no obligation to verify, the accuracy of these returns. Diversification does not assure a profit, nor does it protect against a loss in a declining market.

The risks of an investment in a collateralized debt obligation depend largely on the type of the collateral securities and the class of the debt obligation in which the Fund invests. Collateralized debt obligations are generally subject to credit, interest rate, valuation, prepayment and extension risks. These securities are also subject to risk of default on the underlying asset, particularly during periods of economic downturn. Defaults, downgrades, or perceived declines in creditworthiness of an issuer or guarantor of a debt security held by the Fund, or a counterparty to a financial contract with the Fund, can affect the value of the Fund's portfolio. Credit loss can vary depending on subordinated securities and non-subordinated securities. If interest rates fall, an issuer may exercise its right to prepay their securities. If this happens, the Fund will not benefit from the rise in market price, and will reinvest prepayment proceeds at a later time. The Fund may lose any premium it paid on the security. If interest rates rise, repayments of fixed income securities may occur more slowly than anticipated by the market which may result in driving the prices of these securities down. Foreign investments present additional risk due to currency fluctuations, economic and political factors,

Notes and Disclosure cont'd

government regulations, differences in accounting standards and other factors. Investments in emerging markets involve even greater risks. High yield securities, commonly referred to as "junk bonds", are rated below investment grade by at least one of Moody's, S&P or Fitch (or if unrated, determined by the Fund's advisor to be of comparable credit quality high yield securities).
